Solution

STOP LEAK

Product Specification

- Stop leaking for minutes instantly applied on broken objects
- Premium Product for Instant Metal Repair

High duty thermosetting material with two component epoxy based by filler and additive incorporated to repair damaged metal or non metal (such as leaked hole)

Repair Working Area

- Oil & Gas
- Drilling Operation
- Refinery
- Power Plant
- Industrials
- Fertilizer Factory
- Cement Factory
- Petrochemical
- Marine
- And many more

Product Advantage

- Injection On-Line Leak Sealing (OLLS): Top Site and Down Site area to stop the leak for minutes (fast curing in all extreme climates)
- Best Corrosion & Erosion Protection
- Compatible to all metal and non-metal design and contour with complete metal clamping and its accessories for supporting the reinforcements
- UV and Extreme Climate Resistance
- Flexible for Dynamical Force (especially for tank and pressurized container)
- Best high pressure and high temperature on-stream repair object
- Best adhesive within extreme wet and oily application
- Hydrocarbon Resistance & Best Chemical Resistance

METAL REPAIR

Product Specification

POLINTEK Metal Repair is a product to repair the damaged metal structure as well as adhesive

Repair Working Area

- Oil & Gas
- Drilling Operation
- Refinery
- Power Plant
- Industrials
- Fertilizer Factory
- Cement Factory
- Petrochemical
- Marine
- And many more

Product Advantage

- Compatible to all metal and non-metal design and contour with complete metal clamping and its accessories for supporting the reinforcements
- UV and Extreme Climate Resistance
- Flexible for Dynamical Force (especially for tank and pressurized container)
 - Best high pressure and high temperature on-stream repair object
 - Best adhesive within extreme wet and oily application
 - Hydrocarbon Resistance & Best Chemical Resistance

CONCRETE REPAIR

Product Specification

A two component system consisting of polymers incorporated with an aggregate mix. Once fully cured, the system provides excellent protection from the effects of mechanical and chemical attack.

POLINTEK Concrete Repair is a product to repair the cracking of concrete structure as well as adhesive.

Repair Working Area

Product is ideally suited for application to the following:

- Wall
- Bridge
- Tunnel
- Floor
- Track
- Building
- Road
- RIG
- Manufacture
- Airport
- Jetty
- Other concrete structures

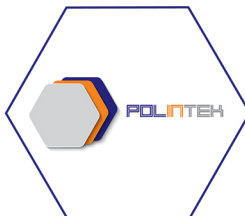

Working Step

- Cleaning
- Injecting

Product Advantage

- Injection Grouting System : Repair Construction in minutes (Fast Curing in All Extreme Climates)
- Best Erosion Protection
- Compatible to All Concrete Structure Design
- UV and Extreme Climate Resistance
- Flexible for Dynamical Force
- Best High Pressure and High Temperature Repair Object
- Best Adhesive within Extreme Wet and Oily Application
- Hydrocarbon Resistance & Best Chemical Resistance
